Plot No. 18, International Biotech Park, Hinjawadi, Phase II, Pune 411057.

Deviation Form

Deviation Number DFV / QC / 25 / 010

Where the deviation was observed?	Department/Area : <u>QC</u>		
When the deviation was observed?	Occurrence Date : <u>21/03/26</u>	Time : <u>12:50</u>	
	Identification Date : <u>21/03/26</u>	Time : <u>13:00</u>	
Justification for delay in initiation of deviation (If applicable): <u>NA</u>			
Product Name:	<u>NA</u>		
Batch Number	<u>NA</u>		
Equipment/System Detail (If any):			
Name: <u>TOC Analyzer</u>	ID No. <u>I/QC/018</u>		
Brief Description of Deviation: While performing the system suitability test (SST) of TOC Analyzer, Instrument ID: I/QC/018, on 21/03/26 at 13:00, in instrument ^① Lab-II (FF-16), analyst (Emp. ID 615) observed that, obtained SST results (Recovery of benzoquinone) is not within the acceptance criteria i.e. 115.1% as per SOP/DP/QC/045 (Limit: 85% to 115%).			
Approved Procedure As per SOP No. SOP/DP/QC/045, Revision No. R02, Title: operation, calibration, maintenance of Shimadzu TOC Analyzer model no. TOC-LCP4 with LabSolutions software section no. 7.4.3.26 mentioned as 'The results of system suitability test must not be less than 85% & must not move than 115%.'			Ref. Doc. <u>SOP/DP/QC/045</u>
Initiated by (Name/Sign/ Date)	<u>Rahul Bachal</u> <u>PTX 21/03/26</u>	Assigned to Department	<u>QC</u>
		Acknowledged by Concern Department (Name /Sign /Date)	<u>Nilesh Pushing</u> <u>(S) 21/03/26</u>
Possible Impact of the Deviation: The SST failure (recovery of benzoquinone 115.1%, above the limit of 85%-115% as per SOP/DP/QC/045) indicates that, the system suitability criteria were not met during analysis. Since, the deviation was occurred prior to reporting the results and the water sample has been kept on hold, no analytical results have been generated or released based on the failed SST. Therefore, no impact on product quality, previously released results is anticipated at this stage. A cascading impact on product quality on scheduled water sample (21/03/26) was anticipated due to the SST failure.

Initiated By:

Name:

Rahul BachalSign/Date: RB 21/03/26

CORRECTION (Immediate action taken if any) The ongoing analysis was immediately stopped after observing that the SST result was outside the acceptance criteria. The scheduled water sample was kept on hold and no results were generated or reported. The issue was informed to the concerned supervisor/section head. As the system suitability test (SST) for TOC analysis did not meet the acceptance criteria, the scheduled water sample analysis has been kept on hold. As an alternative measure to ensure timely monitoring of water quality the test for oxidizable substance performed as an immediate action.

Comments by User Head/Designee:

Investigation shall be carried out for the cause of deviation and appropriate CAPA shall be proposed accordingly.

Reviewed By (User Head/Designee)Name: Seegun PawarSign & Date: 21/03/26

Comments by QA Head/Designee (Initial Assessment): The observed deviation has been reviewed and related to departure from the approved SOP no. SOP/DP/1045. During execution of the SST of TOC analyser failure has been observed. Investigation needs to be performed to find the root cause and based on the investigation outcome CAPA to be raised. The old CAPA needs to be relooked for implementation. Based on the JRA deviation has been classified as major, hence preliminary investigation to be carried out. Considering the type and nature of the deviation evaluation from customer cap is not required.

QA Representative Comments: The cited deviation is related to the system suitability test of TOC analyser is failed. The systematic non-conformance was observed during the calibration activity which is against the SOP for SOP/DP/1045. Based on the preliminary investigation the deviation categorized as major, hence detailed investigation to be carried out to find the actual root cause.

Comments of impacted departments (Specify)

Impact on	Yes / No / NA
Impact on SOPs / Procedure/ Document/ Process/ Qualification / Calibration / Practices / Other (if any), due to occurred deviation	NO

In case Yes (Specify in details): There is no impact on engineering activities due to the observed non-conformance, as an online TOC analyzer available to monitor water quality at the equipment. However, a detailed investigation will be carried out to determine the root cause until the issue is resolved, water quality for the TOC test will be assessed using an alternative method.

FINAL CONCLUSION & CLOSE OUT (By QA Head/Designee):

While writing the closeout, below points shall be considered (But not limited to):

1. Statement regarding root cause or substantiated probable root cause
2. Statement regarding impact to quality, GMP and/or regulatory notification.
3. Statement regarding disposition decision of batches/materials.

The investigation has been carried out to find the root cause of the deviation and based on the investigation outcome, root cause has been identified as a procedure i.e. document is unclear / lacking the details which is required for calibration process. Based on the investigation outcome impact assessment has been done and it is observed that there is no any impact on the equipment performance, earlier tested samples and product quality, hence no any regulatory notification is required. Based on the investigation outcome, CAPA has been raised, hence deviation can be closed.
